

# Vehicle access/dropped kerbs

The diagrams and notes below provide further information to take into consideration.

We cannot grant consent where there are safety concerns due to:

- poor visibility onto the road network
- the point of access causing a danger
- the construction would make an already difficult local parking situation more difficult

You must provide an off highway parking depth of at least 5.5 metres, or 6 metres if the access will be in front of a garage with direct access to the carriageway without causing safety concerns.

You may only park alongside your house when the area is within the curtilage of your property.

Your garden may contain manhole covers and stopcocks. Access to them is required at all times so they must not be covered over.

A simple but effective alternative to continuous surfacing is wheel strips formed by laying two lines of heavy duty paving slabs.
